P♦MET 714

Arc Spray Wire

DESCRIPTION

P♦Met 714 is a high carbon steel wire specifically designed for arc spraying. It produces dense, well-bonded coatings with excellent wear resistance, and is widely used for machine element repair, dimensional restoration and wear resistant applications. **P♦Met 714** low shrink characteristics allow for increased coating thickness.

TYPICAL DEPOSIT CHARACTERISTICS:

- Typical Hardness — HRC 20-25
- Bond Strength — 4800 psi
- Deposit Rate — 10 lbs /hr/100A
- Deposit Efficiency — 70%
- Wire Coverage — 0.8 oz/ft^2 / m
- Surface Texture — *Variable
- Machineability — Good

* Depends on air pressure used.

SURFACE PREPARATION:

Surface should be clean, white metal, with no oxides (rust), dirt, grease, or oil on the surface to be coated. **Note:** It is best not to handle surfaces after cleaning.
Recommended method of preparation is, to grit blast with 24 mesh aluminum oxide, rough grind, or rough machine in a lathe.

APPLICATION:

- Part Restoration
- Seating Surfaces
- Press Fit Surfaces
